

BizPortals QCFlow for Acumatica

Connected Quality Management for a Smarter ERP Ecosystem

Acumatica ERP powers core business operations with flexibility and control. As quality processes become more critical and dynamic, organizations require stronger alignment between quality management and ERP data.

BizPortals QCFlow integrates seamlessly with Acumatica, enabling structured data exchange, real-time synchronization, and aligned quality processes without disrupting your ERP environment.

The Challenges:

- Quality processes managed outside ERP workflows
- Manual effort to align quality and operational data
- Limited real-time visibility across systems
- Delayed response to quality issues
- Gaps in traceability and audit readiness

These challenges stem from disconnected systems —not from ERP limitations.

The Solution:

BizPortals QCFlow bridges quality management and ERP operations through secure, structured, and bi-directional integration with Acumatica.

This enables:

- ✓ Real-time data exchange across systems
- ✓ Contextual quality processes aligned with ERP records
- ✓ Automated handling of quality events
- ✓ Continuous synchronization of results and actions
- ✓ Role-based access control for secure operations

The result: two powerful systems working in sync as one connected environment.
