

BizPortals **Essentials** Suite

An Excellent Upgrade for Your Digital Workplace

Discover the all-new BizPortals Essentials Suite, a value-packed suite of four essential web parts: Location, Weather, File Dropbox, and Counter. Each web part stands out with its own features, contributing differently to complete your SharePoint and Microsoft 365 environment. It integrates multiple essential functions into one unified package, reducing complexity and improving workflow efficiency.

From accessing weather conditions of multiple cities to using a drag-and-drop feature for bulk file uploading or tracking multiple metrics, the dedicated package of user-friendly and customizable web parts ensures your organizations operate smoothly and effectively.

Exploring the **BizPortals Essentials Suite** in Detail

BizPortals Locations

Get access to the key geographic point of interest without leaving your SharePoint environment. Leverage a dedicated location web part to showcase multiple branch offices, stores, franchises, remote project sites, event venues, or any other specific location on the map.

It enables employees to understand the geographic context more effectively for improved planning and coordination and better resource allocation.

Along with effortless zoom-in and zoom-out, users can select from multiple themes and layouts and set the number of records displayed in the web part.

BizPortals Weather

A go-to resource for organizations managing operations vulnerable to weather conditions. The weather web part included in the Essentials Suite helps employees track weather forecasts for multiple cities over a period of seven days.

The data from the weather web part aids employees in scheduling outdoor activities, allocating resources, planning logistics, and proactively managing weather related risks from time to time.

Users can easily add multiple cities, switch temperature scales using a toggle button, choose a specific forecast period, and select from the various layouts given in the web part settings.

BizPortals File Dropbox

The file drop box feature offers a single interface allowing users to upload files to different libraries within the SharePoint environment. The easy drag-and-drop option, coupled with the bulk upload feature, simplifies the document uploading process and minimizes the complexities of navigating SharePoint libraries and sites.

Select the desired library from the drop-down, drag the files from the device, and drop them into the web part, thereby saving a lot of time.

Furthermore, users can specify the upload path by selecting the site/subsite, library, and folder and implement role-based access to ensure only authorized members upload the files.

BizPortals Counter

BizPortals Counter helps users present the list's item counts in a dedicated web part display. Using the dynamic web part, users can showcase project summaries, event registrations, compliance checklists, IT ticket status, and more in a single interface to effectively monitor and manage a range of tasks or processes.

Configure and manage different lists, create multiple counters, differentiate them with color visualizations, and apply custom themes and layouts that align with your organization's branding.

Experience the difference in operational efficiency and workplace collaboration with the BizPortals Essentials Suite.
